EU Work-Authorized (Slovak permit) | Eligible to work across the EU/EEA without sponsorship

PROFESSIONAL SUMMARY

AWS DevOps Engineer with 4 years of experience automating microservices delivery on Kubernetes (EKS) using Terraform, Jenkins, ArgoCD, and GitOps. Reduced production deployment time by 90%, sustained 99.5% uptime, and cut monthly cloud spend by 25%. Embedded DevSecOps controls (Snyk, AWS Security Hub, IAM least-privilege, KMS encryption) into CI/CD pipelines to security-gate every production build. Promoted from Junior DevOps Engineer to DevOps Engineer for ownership of the production platform. HashiCorp Certified: Terraform Associate. EU work-authorized, no sponsorship required.

CORE COMPETENCIES

Cloud Platforms: AWS (EC2, S3, IAM, VPC, Lambda, CloudWatch, CloudFormation, Auto Scaling, ECS, EKS, RDS, Route 53, Secrets Manager, AWS Config); Azure (AKS, Azure DevOps); GCP

Infrastructure as Code: Terraform, AWS CloudFormation, Ansible, Packer

CI/CD & Automation: Jenkins, GitHub Actions, GitLab CI/CD, AWS CodePipeline, AWS CodeBuild, AWS CodeDeploy

Containers & Orchestration: Docker, Docker Compose, Kubernetes (EKS, self-managed), Helm, ArgoCD, GitOps, Horizontal Pod Autoscaler

DevSecOps & Security: Snyk, AWS Security Hub, IAM least-privilege, KMS encryption, secrets management, vulnerability scanning, security-gated pipelines

Monitoring & Observability: Prometheus, Grafana, ELK Stack, AWS CloudWatch, SLI/SLO/SLA, MTTR reduction

Scripting & Languages: Bash, Python, YAML, JSON

Version Control: Git, GitHub, GitLab, Bitbucket

Operating Systems: Linux (Ubuntu, CentOS, Amazon Linux), Windows Server

Practices: Site Reliability Engineering (SRE), Platform Engineering, Agile/Scrum, Disaster Recovery, High Availability, Cloud Cost Optimization, Jira, Confluence

PROFESSIONAL EXPERIENCE

DevOps Engineer

March 2024 – April 2026

Promoted from Junior DevOps Engineer. Owned delivery automation, security gating, and platform reliability for microservices running on AWS EKS.

- Integrated automated vulnerability scanning (Snyk, AWS Security Hub) into CI/CD pipelines, security-gating every build before production release and enforcing IAM least-privilege access and KMS encryption across all environments.
- Re-architected the CI/CD pipeline using Jenkins and ArgoCD (GitOps), cutting production deployment time from 3 hours to under 30 minutes and enabling multiple daily production releases.
- Designed and operated production-grade Kubernetes (EKS) clusters for microservices workloads, reducing manual operational intervention by 70% and improving deployment reliability.
- Authored reusable Terraform modules for VPCs, EKS clusters, RDS, S3, and IAM roles, cutting infrastructure provisioning time by 80% and eliminating manual console operations.
- Built a centralized Prometheus and Grafana observability stack with custom alerting dashboards, reducing Mean Time to Resolution (MTTR) by 50%.
- Lowered monthly AWS spend by 25% through EC2 right-sizing and a Reserved Instance purchasing strategy.

Junior DevOps Engineer

Jun 2022 – February 2024

Built and operated build/release pipelines and AWS infrastructure across test and production environments.

- Migrated 8 legacy on-premise applications to AWS with zero unplanned downtime, raising application uptime from 95% to 99.5%.
- Delivered and maintained 10+ microservices end-to-end across test and production environments.
- Automated provisioning and configuration of 30+ servers using Ansible playbooks, eliminating manual setup effort.

- Engineered highly available, scalable infrastructure using S3, Elastic Load Balancers, and Auto Scaling groups.
- Enabled proactive incident response through CloudWatch alarms and SNS alerting; maintained runbooks and root-cause analysis documentation.

CERTIFICATIONS

- HashiCorp Certified: Terraform Associate (2026)
- Active open-source contributor; continuous learner via CNCF, HashiCorp Learn, and the AWS Architecture Blog

PROJECTS & OPEN SOURCE

Git File Explainer (GFE) | *Founder & Sole Developer*

Open-source Chrome extension, live on the Chrome Web Store

- Solo-shipped a Manifest V3 Chrome extension end-to-end (architecture, development, release, and ongoing maintenance) that explains code directly on GitHub and GitLab blob pages via an injected sidebar.
- Delivered file-purpose summaries, key-point highlighting, complexity rating, follow-up Q&A, and shareable summaries across 21+ file types including .tf, .ts, .py, .go, .java, and .cpp.

Kubernetes GitOps Delivery Platform | *Amazon EKS, Helm, ArgoCD*

- Built a declarative, auditable GitOps delivery platform on Amazon EKS with Helm and ArgoCD; implemented Horizontal Pod Autoscaler to handle variable load and improve resilience under peak traffic.

Highly Available 3-Tier AWS Architecture | *Multi-AZ, Terraform*

- Provisioned a multi-AZ, 3-tier architecture with horizontal auto-scaling using fully version-controlled, repeatable Terraform; managed sensitive configuration via AWS Secrets Manager.

EDUCATION

BSc, Mathematics, Chemistry and Computer Science

2018 – 2021

Kakatiya University

Relevant coursework: Data Structures and Algorithms, Computer Networks, Big Data Analytics.

ADDITIONAL INFORMATION

Work Authorization: Valid Slovak work permit (EU). Eligible to work across the EU/EEA without sponsorship.

Languages: English (Professional), Telugu (Native)
